Introducing Web Confidential...

Where do *you* keep your confidential data?

Like most people these days, you've probably got a growing number of user IDs, passwords, registration keys, PINs, serial numbers, and the like, stored in various places on your Mac or scribbled on miscellaneous pieces of paper around your home or office. When you stop and think about it, you probably have more of these pesky bits of information scattered about than you realize.

The proliferation of the Internet is exacerbating this situation. Increasing numbers of commercially-oriented sites, such as the NY Times, require some form of registration even simply to view content. Other transaction-oriented sites, such as Amazon.com, or personalized newsites, such as My Yahoo, require passwords for personal services.

Now there is a software program to manage passwords and the like: it is called Web Confidential. It uses an intuitive, easy-to-use cardfile metaphor which will enable even novice users to get up to speed in no time. Power users will find a large number of options to enable them to configure Web Confidential to meet their specific needs.

If you are an enthusiastic Web surfer, you will be especially impressed at the tight integration Web Confidential offers with your favorite Internet applications, such as Netscape Navigator, Explorer, Eudora and EMailer. Web Confidential takes full advantage of the Mac operating system's outstanding facilities, such as Interprogram Communication and Shared Menus, to make Web Confidential work seamlessly with these programs.

For creating pages containing personal account information at commercial sites, Web Confidential offers you the one-click convenience of its Password Shared Menu, saving you from the bothersome chore of having to retype your user ID and password each time you log in.

Last but not least, Web Confidential permits you to encrypt your password files, protecting this sensitive information from prying eyes, using a state-of-the-art encryption algorithm. Your key can be up to 448 bits in length.

Download

Web Confidential is shareware.

Please download Web Confidential:

in the USA:

- [Web Confidential Installer \(.hqx\) \(577K\)](#)
- [Web Confidential Installer \(.bin\) \(425K\)](#)

in Europe:

- [Web Confidential Installer \(.hqx\) \(577K\)](#)

A User's Guide is included with the download. You might want to read it [online](#) in your Web Browser if you have the PDF Viewer plug-in installed.

Please send any comments to [Alco Blom](#).

Additional information:

Release Notes 1.2

More Preferences

Several new preferences have been added (see below).

- When deleting information you are now presented a confirmation alert.
- You can configure the categories so that they will be automatically sorted.
- You can set an option to always show the associated notes.
- You can automatically save documents when you close windows.
- You can save documents every 'x' minutes.

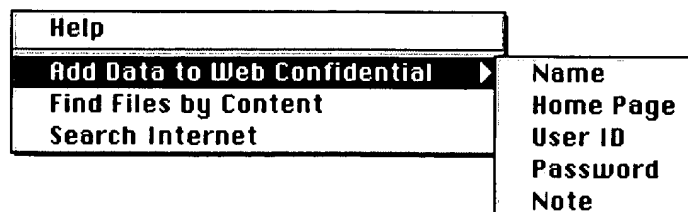

- When you enable the option "Never Show Glasses Icon", passwords can not be shown even when the password file is open. This option is in the 'At Startup' Preferences Panel.

CMM Plug-in

Web Confidential is now accompanied by a Contextual Menu Manager (CMM) Plug-in. Its purpose is to make entering data into Web Confidential cards much easier. For example. Select a piece of text in your e-mail message or text editor and then Control-Click. With the hierarchical command shown below, you can transfer the data to one of the five available fields of a Web Confidential card. The command adds data to the current open card. If there is no open card, a new card is created in the current category.

To install this CMM Plug-in, drag and drop it to the System Folder (Mac OS 8 or higher is required).

Note: because many applications still do not support the Contextual Menu Manager of Mac OS 8, it is important that you install Apple Data Detectors. This will make sure you can Control-Click on selected text in any application: Go ahead and download [Apple Data Detectors](#).

[[Release Notes 1.1](#)]

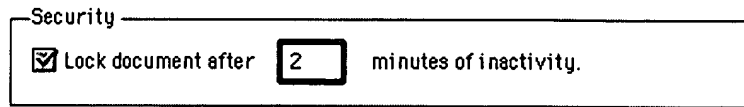

[Web Confidential Home Page]

Release Notes 1.1

Support for Navigation Services of Mac OS 8.5.

Support for Theme Fonts of Mac OS 8.5.

Automatically close your documents after a specified interval of user inactivity.

Note: this option is located in the "Security" tab of the Preferences window.

Copy Card and Paste Card commando to easily copy card data between categories.

Export To Text commando to export your data to Tab Delimited format.

An icon is shown in the Card Window when there is an associated note.

You may use Drag And Drop to add text to the card fields.

An option to use Internet Config's setting for the screen font.

Added a change to accomodate Communicator 4.5.

Fixed a crash with Mac OS 8.0.
